

LINKING HIGH FIDELITY PROTOTYPE TO DESIGN IN CLASS

1. GESTALT

Similarity: The three major sponsors of Reach Autism have a similar layout i.e. shape, color, size or texture and would be considered a group because they would be it is logical to place similar related information alongside each other to make them easy to understand when viewed, especially at first glance.

Proximity: The Gestalt principle of proximity has been applied here by placing different reviews from past customers alongside each other to make it easier to view and understand that they can be viewed as a group.

2. AFFORDANCES

Signifiers like this have been strategically placed under major parts of the homepage to notify the user that there is more information to be found in regard to what is viewed.

3. CONSTRAINTS

Strict alignment to the concept of a non-profit organization that offers services to families with autistic people in terms of color and size of information on my homepage.
